Methodology and Limitations

1. **Automated Testing:** This report is generated from automated axe-core scans using @axe-core/playwright. Axe-core version 4.12.1 was used with tags: wcag2a, wcag2aa, wcag2aaa, wcag21a, wcag21aa, wcag21aaa, wcag22a, wcag22aa, wcag22aaa, best-practice, ACT, section508, EN301549.
2. **Routes Audited:** 18 routes were scanned including login, welcome, customer management, CRM pipeline, and all system settings pages.
3. **Coverage Limitations:** Axe-core covers approximately 50 of 86 WCAG 2.2 success criteria automatically. Success criteria not covered by axe rules are marked 'Not Evaluated' and require manual review.
4. **Conformance Status Definitions:**
    - **Supports:** All automated axe rules for this criterion passed on all audited routes.
    - **Partially Supports:** At least one axe rule violation was detected on one or more routes.
    - **Does Not Support:** All axe rules failed (no route passed).
    - **Not Evaluated:** No automated axe rule covers this criterion; manual review required.
5. **Remediation Priority:** Violations should be remediated in order of impact: critical > serious > moderate > minor. See the downloadable PDF for detailed violation information.
6. **Manual Review Required:** A complete VPAT requires manual review of all 'Not Evaluated' criteria. This includes keyboard navigation testing, screen reader testing, cognitive accessibility review, and verification of content alternatives for media.
